

Developmental Steps Towards Adolescence for Children Aged 7-12 Project

The “Developmental Steps Towards Adolescence for Children Aged 7-12” project was implemented from 9 October to 15 December 2023 for children aged 7-12 under protection and care at the Şeyh Zayed Children’s Homes Complex in Bahçelievler, İstanbul. Through a series of workshops delivered over ten weeks, the project aimed primarily to support children’s social-emotional development, while also promoting their holistic development across the cognitive, language and communication, and physical domains.

As part of the project, engaging and enjoyable activities were implemented to support children in developing positive peer relationships; recognising, understanding, and expressing their emotions; and strengthening their self-regulation and self-control skills.

Led by Professor Arzu Yükselen, the project was conducted under the supervision of Lecturer Medine Pervin Baysan, Lecturer Aziz Küçükkelepçe, and Research Assistant Münevver Emir, with the participation of students from the Departments of Child Development at the Faculty of Health Sciences and the School of Health Sciences.
